

Supplying a profile photo

General points

- > Images work best supplied in landscape format
- > Image size should be around **20cm** wide at **300dpi** (expect the file size to be at least 2mb)
- > Don't take photos directly from social media platforms, these are automatically saved at screen resolution and aren't suitable for print, please supply the original jpg.
- > If the photo was taken on a smartphone, email it to us at the largest size possible
- > Please don't supply a selfie if possible

Composition

The two photographs below are perfect to use as profile images. They are both taken in landscape format with minimal detail in the background. Photos are taken from around the waist upwards with head and shoulders all in shot, this is very important as it allows us to extend parts of the image.

Try to avoid supplying photos cropped like this
